

Two Companies. One Direction.

Do you want your business to be truly ultra thin?

With Mitel and Sun Microsystems it can be.

We may be two distinct companies. But we share one clear direction: more freedom and flexibility. We offer a unique opportunity to access both your voice and data settings with one slim Java card via a Mitel IP phone and Sun Ray™—and to combine the best voice system and applications on an industry-standard server. Our combined solution will revolutionize your computing and voice workstation.

Virtualize.

Voice and Data with Sun Ray Unified IP Client from Mitel

Imagine the revolutionary power of a single Java smart card driving your access to all your voice / computing applications. To truly integrate voice and data Mitel has taken the Sun Microsystems ultra thin client Sun Ray technology and turned it into a slim module that snaps securely onto Mitel IP phones. The Sun Ray Unified IP client from Mitel provides one simplified, device-secure authentication source for voice and data hot desking.

By combining the Mitel IP phone thin client modules with the ultra thin client Sun Ray, you get unprecedented flexibility. Freeing you to work anywhere by simply inserting your Java card into a Sun Ray Unified IP client from any location— instant access to your telephony features and personal desktop. Everything is centralized at the back office—making management highly efficient and effective.

The Java card controls all your voice and data access—and using it allows data to stay centralized and secure in the back office. An unprecedented level of security— and freedom—for your company-sensitive data that lets you work anywhere worry-free.

Even better, the reduced need for power—replace a desktop PC with the Sun Ray and you can drop up to 75 watts—allows instant reduction of operating expenses and your carbon footprint.

Consolidate.

Mitel Communications Suite on a Sun Fire X4150 Server

Define a perfect voice and data experience: a rich 30-year history of call control and exceptional industry-standard servers.

Find it with Sun's unique design principles—the Sun Fire™ X4150 server beats all others in terms of performance, expandability, and energy efficiency—and Mitel's award-winning Mitel 3300 IP Communications Platform (ICP) and must-have applications—including Mitel Teleworker Solution, Mitel NuPoint Messenger™ IP, and Mitel Mobile Extension.

Porting Mitel's 3300 ICP and associated applications on the Sun Fire X4150 reduces the need for proprietary boxes. It's the perfect package for all businesses looking to reduce install times; get secure, centralized management; and lower their total cost of ownership.

Optimize.

It's the Old Adage: Do More with Less

Predicting the future can be easy, but making the future come to life in the here-and-now takes a deeper understanding of what is relevant and applicable. The rich understanding and innovative leadership of voice over IP that Mitel brings to the table and Sun's industry-savvy platforms are the right ingredients to deliver the very simple idea of doing more with less.

Now you can get the innovative IP communications solution that merges voice and data hot desking with an energy efficient ultra thin client from Sun Microsystems. The back end is controlled by the Mitel Communications Suite running on an X4150 Sun server.

Mitel and Sun—together—deliver an innovative and user-friendly solution that pares down the size and energy demands and ramps up the flexibility and mobility.

If you had to foretell the future—this may well be it.
