

ENTERASYS ENTERPRISE MANAGEMENT

● Objectives

Students will learn how to leverage their investment in Enterasys NetSight Platforms, to improve control of their network fabric.

● Class Summary

This course will offer an instructor-led classroom experience with supporting lab exercises on various Enterasys switching platforms. NetSight management applications will be explored with emphasis on set-up and deployment in a real-world environment. These applications will include Console, Inventory Manager and Policy Manager.

● Class Description

The NetSight Atlas course is designed to present networking professionals with the knowledge to properly deploy NetSight Atlas management applications to utilize a wide range of network node management capabilities on both Enterasys and non-Enterasys devices. This course covers all aspects of NetSight Atlas, which offers system-level command and control for enterprise-wide, multi-device management. The course covers maintaining and troubleshooting various devices in a network with overviews of the following NetSight Atlas Applications:

- Console
- Inventory Manager
- Router Services

● Class Content

- Course Overview
- Getting Started and Sever Configuration
- Console Features
- Inventory Manager
- Policy Manager

● Who Should Attend

Network Administrators, Pre-Sales Engineers, Post-Sales Engineers, Security Managers and Consultants

● Prerequisites

Solid networking foundation with knowledge of TCP-IP, SNMP, And the OSI Model as it relates to traffic classification, and General network flow patterns.
