

Complete Cybersecurity. AI-Powered. Expert Backed.

Always-on protection. Proven to stop threats in their tracks.

In partnership with Cynet, delivers fully managed cybersecurity built to keep pace with modern threats. AI-powered detection and automation work continuously across every layer of your environment, with 97% of advanced threats identified autonomously, enabling faster containment before threats can spread.

Behind the technology, our Elite 24x7 SOC provides expert oversight and response, continuously monitoring, investigating, and taking action when it matters most. The result is always-on protection, faster response, and the confidence that your organization is secured.

We provide comprehensive protection across every layer of your environment including:

Your Endpoints

We stop ransomware, malware, and advanced attacks on your computers, servers, and mobile devices before they disrupt your organization.

Your Network

We prevent attackers from moving laterally across your network and block connections to dangerous websites, reducing the risk of a costly breach.

Your Users

By continuously monitoring user behavior, we detect and block malicious insiders and compromised accounts to protect your people and critical data.

Your Email

We scan emails to block phishing attacks, dangerous attachments, and suspicious senders, one of the top ways cybercriminals access small organizations..

Your Cloud Applications

We help you manage risks across your SaaS and cloud apps, keeping your organization compliant and your data secure.

Your Critical Infrastructure

We provide third party system monitoring including firewalls and active directory services to stop attackers before they impact operations.

Modern attacks are no longer single events.

They're fast-moving chains that spread across your entire environment.

What starts as one compromised user or device can quickly escalate, moving through identities, networks, and systems in minutes.

We provide protection that extends across the full attack path, stopping threats early and preventing them from escalating into larger incidents.

You'll also benefit from:

Support for Compliance

and cyber insurance requirements through stronger security posture and documentation.

Continuous 24x7 protection

combining AI-driven detection + human-led response, stopping threats in their tracks.

Proven Performance

backed by Cynet, the only vendor to achieve flawless results in the MITRE ATT&CK® Evaluations for three consecutive years.

Faster Recovery

and responsive support in the event of an incident to minimize downtime.

Ready to strengthen your cybersecurity posture?

Discover fully managed, AI-powered cybersecurity designed to help organizations protect sensitive information, support compliance obligations, and protect against the full attack path. Contact us today.

About Cynet Partnership:

Together with Cynet's unified, AI-powered cybersecurity platform and 24x7 Elite SOC, we deliver continuous protection across the full modern attack path. AI-powered speed, intelligent automation, and expert human oversight work together to improve the speed and efficacy of threat detection and response, helping reduce risk and stop threats before they can spread across your environment.
