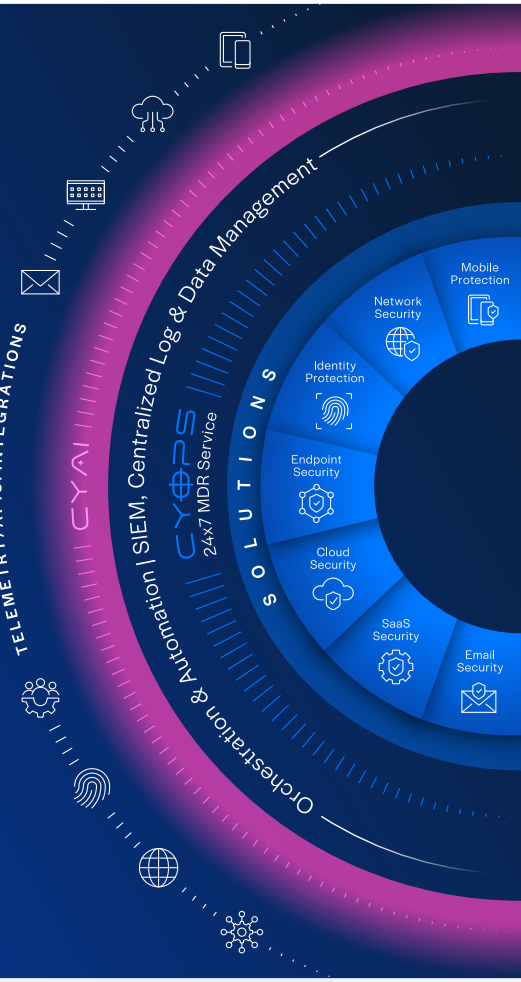
powered by cynet

Unified. AI-Powered. Expert-Backed.

Simplify Security. Speed Response. Amplify Protection.

Cynet brings together every critical layer of cybersecurity into one AI-powered platform that works around the clock to keep organizations safe. It detects, investigates, and responds to threats automatically, backed by real security experts who monitor the entire environment 24x7.



Why Partners and Lean Teams Choose Cynet

Unified Security
Complete protection across endpoint, network, user, identity, email, cloud, SaaS, and mobile in one platform.

AI-Powered Detection & Response
CyAI autonomously detects and remediates 90% of threats with sub-second response.

24x7 MDR Expertise
CyOps security experts monitor, investigate, and remediate threats around the clock, so you don't have to.

Proven Performance
The only vendor with 100% results in back-to-back MITRE ATT&CK® evaluations with zero false positives.

Modern Security Demands a Unified Platform

Today's threats move faster than most teams can respond. Many organizations rely on multiple tools that don't work well together, creating blind spots, slow responses, and rising costs. Cynet changes that.

By unifying protection, detection, and response, Cynet helps organizations stay ahead of every threat while simplifying how security is managed. With Cynet, you will:

Detect and stop advanced threats automatically

Protect every part of the environment with one solution

Eliminate tool sprawl and integration headaches

Gain 24x7 expert protection from CyOps MDR

Respond in seconds, not hours

Complete Protection in One Unified Platform

Cynet replaces the complexity of managing separate point products with a single, unified platform that protects everything from endpoint to cloud.

CyAI

The Intelligent SOC Agent

CyAI learns from millions of real-world threats to predict and stop attacks before they begin. By connecting signals across your environment, it automates investigation and response so teams can focus on what matters most.

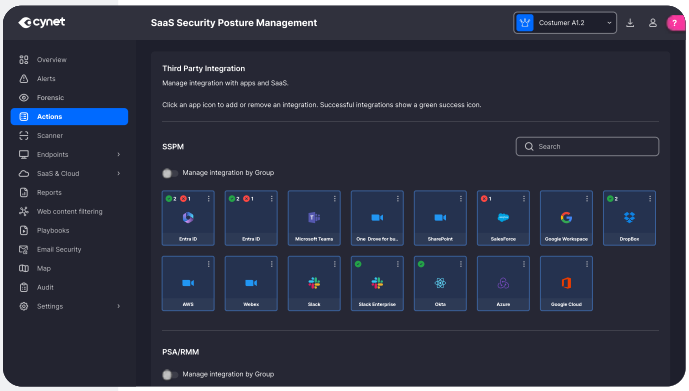
CyOps 24x7 MDR

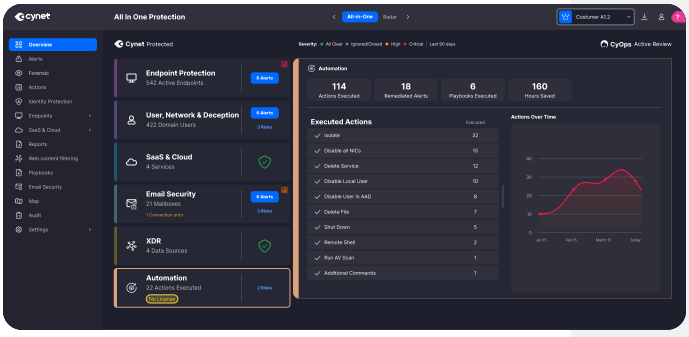
Real people. Real protection. Real results.

CyOps is Cynet's 24x7 Managed Detection and Response (MDR) team, operating as an extension of your own. These dedicated experts monitor the environment, investigate alerts, and act in real-time when threats are detected.

Integrations and APIs

Cynet integrates with the tools IT and security teams already use to deliver unified visibility and control—no tech stack changes required. Hundreds of APIs and 80+ built-in integrations enable data ingestion and response orchestration across the entire security ecosystem.





Security Orchestration, Automation, and Response (SOAR)

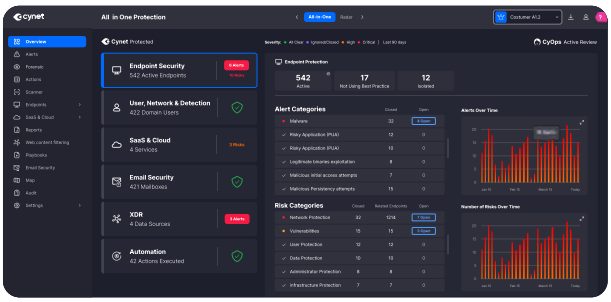
Cynet's built-in automation and SOAR reduce response times from hours to seconds. Predefined playbooks automatically isolate infected systems, block malicious traffic, and eliminate threats across the environment.

One Platform. Many Solutions.

Cynet protects more of what matters with one, unified platform.

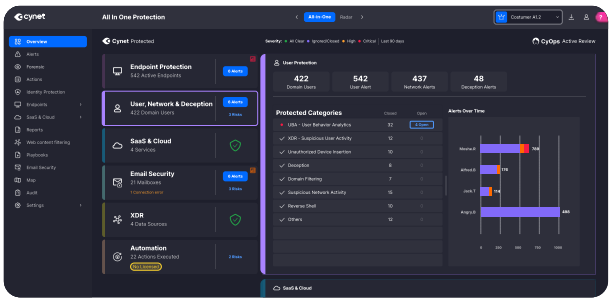
Endpoints

Cynet keeps workstations, servers, and mobile devices safe from malware, ransomware, and other dangerous cyber threats with proven NGAV, EPP, EDR, ESPM, Ransomware Protection, and Mobile Threat Protection.



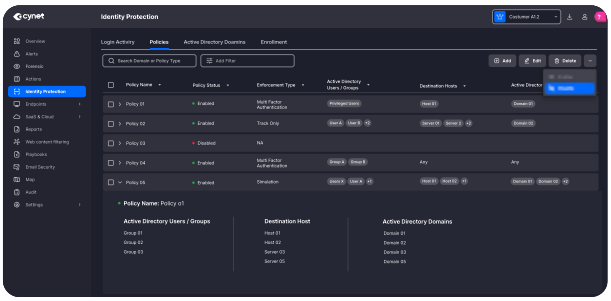
Networks

Cynet detects and prevents stealthy attackers from accessing and moving laterally across the network, as well as blocking connections to malicious sites with NDR, Web Content Filtering, Deception, and External Attack Surface Management.



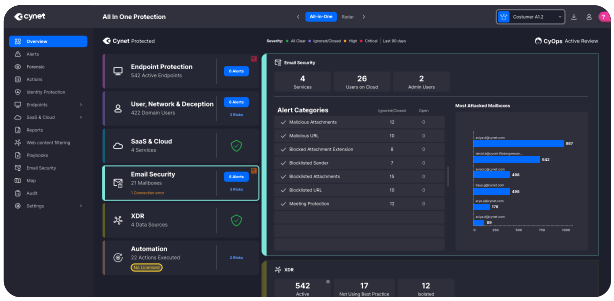
Identities

Cynet unifies identity and threat defense- creating a single layer of protection across all endpoints, users, and cloud environments for stronger Identity Threat Detection and Response (ITDR).



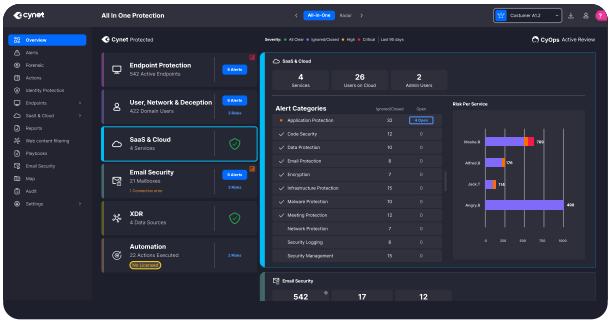
Email

Cynet Email Security protects email accounts, cloud email gateways, and communication from phishing attacks, unauthorized access, loss, or compromise.



SaaS & Cloud Environments

Cynet automatically identifies, prioritizes, and fixes security risks across the organization's SaaS applications and Cloud environments with SSPM and CSPM.



Mobile

Cynet provides continuous, on-device monitoring to detect known and unknown threats in real-time across the kill chain: device, network, phishing, and app attacks.

Proven Results. Customers Trust.

Cynet delivers measurable results: faster detection, rapid containment, and simplified operations. Thousands of organizations worldwide rely on Cynet, validated by G2 and Gartner Peer Insights to deliver unmatched outcomes:

100%
MITRE-Validated Detection, Protection, and Technique Coverage with zero false positives

90%
90% of threats remediated automatically without human intervention

<1s
Detection to full containment in under one second

50x
Resolve threats 50x faster with less manual incident handling

95%
Customer satisfaction rating

> "Cynet is more than just another vendor, but a partner committed to keeping our organization secure."
>
> Ryan Lynn, **Security Specialist, The Church of the Nazarene**

> "Cynet's comprehensive offering provides the visibility and protection necessary to guarantee a safe, secure, and reliable network."
>
> Phillip Bickelhaupt, **Director of Technology, Wisconsin Rapids Public Schools**

> "The balance of strong protection and seamless performance makes Cynet the ideal solution for the unique demands of the K-12 Environment"
>
> Shawn Hammons, **Cybersecurity Manager, Educational Service Unit #3**

About Cynet Partnerships

In an era where complexity slows progress, Cynet Security join forces with Solution Providers across the globe to deliver clarity and confidence. Our Unified AI-Powered Cybersecurity Platform equips organizations with seamless protection and continuous SOC support, transforming the way security is experienced.
